Hiring Team
[Company Name]

Dear Hiring Team,

I am writing to apply for the Backend / Software Engineer position at [Company Name]. Your team's work on scalable systems, robust REST APIs, and production engineering lines up closely with how I build software and the responsibilities I hold daily.

At Opream, I build and maintain backend services in Python (Django REST Framework) and NestJS on PostgreSQL across multiple production platforms in an agile team. I have designed and shipped key systems end-to-end, including: - **Mostaqbel Watan**: A private community social network with real-time Socket.io chat, self-hosted Jitsi video meetings, and automated Facebook Graph API data ingestion. - **OnWay**: A ride-hailing platform with Fawry payment gateway integration, webhook callbacks, transaction verification, and state machine workflows. - **Kalia**: An AI-powered fintech app featuring web scraping pipelines that aggregate bank promotions and credit card deals, integrated with an AI agent to recommend personalized financial offers. - **Al-Azhar Education Platform**: Comprehensive course management, lesson delivery APIs, and granular role-based access control.

Scalability and reliability for me start at the database. I routinely profile queries, eliminate N+1 patterns with targeted ORM prefetching, design normalized schemas, and apply indexes to keep endpoint latency low. I write automated test suites using pytest and Jest to guard critical business paths, develop in Dockerized environments, and review team pull requests to maintain high code standards.

My foundation comes from a Computer Science degree, the intensive 9-month ITI Full Stack track, and competitive programming with ECPC, which trained me to write clean code that handles complex edge cases and scales under real load.

I would welcome the opportunity to discuss how my hands-on backend and system engineering experience can contribute to [Company Name]. Thank you for your time and consideration.

Sincerely,
Nizar Esmat Fawzy
