Hiring Team

Siemens

Dear Hiring Team,

I am writing to express my interest in a Software Engineer position at Siemens. I am drawn to the scale and rigor of Siemens' engineering culture, and to the opportunity to apply production-grade software practices to problems that operate at industrial and global scale.

As a Software Engineer at Opream, I own production features end-to-end across five concurrent client platforms, working with Node.js/NestJS, React, and PostgreSQL/MongoDB – covering everything from database schema design to secure API development to frontend integration. I designed a normalized PostgreSQL schema supporting 10,000+ users with ETL-style data pipelines during my internship at ITI, and built a secure, service-oriented REST API (JWT auth, encryption, structured validation) for an anonymous messaging platform, along with a full-stack real-time chat application with live presence and rate-limiting protections. This work has given me strong fundamentals in object-oriented design, RESTful API architecture, database modeling, and writing clean, testable, maintainable code – along with day-to-day use of Git, Docker, and Linux.

I also bring strong communication skills from my time as a part-time Software & Web Development Instructor, where I mentored students through programming fundamentals and web development, and from co-leading backend architecture decisions with cross-functional teammates. I adapt quickly to new stacks and requirements, having shipped across five different client platforms with distinct technical needs in my current role.

I would welcome the opportunity to discuss how my background in full-stack development and system design could contribute to Siemens' engineering teams. Thank you for your time and consideration.

Sincerely,

Nizar Esmat Fawzy
